Critical Care

Equipment

The Leader in Non-Emergency Transports Now Does Advanced Life Support

MedRide Assisted Transportation Services, the leader in non-emergency transports in the State of Oklahoma has listened to your suggestions and is now offering Advanced Life Support and Critical Care Transportation. Our Management has been working overtime locating and obtaining the latest in EMS Technology including American Emergency Vehicle Type III Ambulances, Physio LifePak 12 Cardiac Monitors, Ferno PowerFlexx Power Cots, Impact Ventilators, and powered medication Pumps. We have put together an outstanding management team, and with the help of our field Medics we are here to take care of all of your patient's needs. Our staff has undergone new training to be able to understand your needs for Critical Care Transports, including all the medications your patients might need administered or any other equipment they might need. MedRide Oklahoma Critical Care Transport Billing Department can answer all of your questions regarding Medicare, Private insurance and patient billing. We are excited to bring forth this new division of our business and look forward to expanding with you.

IMPACT

*Impact
Transport
Ventilators*

We have obtained the latest in transport vent technology to make sure that our patients have only the best care. These vents not only do adult patients but have the capability of being used on infant all the way to adult patients. The 73X's simple user interface is easily managed by personnel. It has an internal compressor and also works with O2. The 73X uses adult and pediatric disposable circuits, and includes a digital airway pressure display, alarms suite, airway pressure limiting, and continuous operation from external power. It runs for 6 continuous hours on the internal compressor and 11 continuous hours on O2.

LIFEPAK 12

*Medtronic
LifePak 12
Monitor/
Defibrillator*

The LIFEPAK® 12 Defibrillator/Monitor is a multi-parameter device that combines semi-automated and manual defibrillation with Capnography, external pacing, 12-lead electrocardiography and other monitoring functions.

Select AED, manual defibrillation or both, and noninvasive pacing, pulse oximetry (SpO₂), 12-lead ECG analysis or LCD display, Capnography and noninvasive blood pressure (NIBP)

POWERFlexx™+

Ferno

The **POWERFlexx™+ System** delivers advanced power management and features an in-the-fastener charging to keep you powered on every call, without having to carry around extra batteries or take them out to charge. As soon as you lock into the fastener, The ICS Integrated Charging System charges the battery.

The POWERFlexx+™ Powered Ambulance Cot also features **700lb** unassisted lift capacity. The cot lifts the 700 lb. weight, not the operators, reducing situations where operators may injure their back.

POWERFlexx™+ LBS

*Ferno
PowerFlexx
With LBS*

Quickly convert a Ferno Cot to a bariatric cot with the LBS Jr. Bariatric Board Attachment. There's no need to purchase and maintain a specialized cot. The LBS folds flat for easy storage in an ambulance, and can be deployed for use in minutes. The unique design increases the width of a standard cot to accommodate larger patients and does not interfere with the function of a cot. Folding "wings" reduce the LBS JR profile for better maneuverability through doorways.
